WHY IS TREATMENT POSSIBLE?

~ A PERSPECTIVE OF SYSTEMS MEDICINE

By Professor Guan-Yuan Jin, MD
Director, International Institute of Holistic Medicine, WI

Co-author of the book "Principles of Systems Medicine" (China Science & Technology Press, Beijing, 2017)

INTRODUCTION TO REVOLUTIONARY CONCEPTS OF SYSTEMS MEDICINE !!

Date/Time: Monday, Oct 30th, 12pm–1pm **Location: COM Classroom 1A, CNU**

By answering the above "simple" yet unconventional question, Dr. Jin will introduce the revolutionary concepts of medicine, including novel definitions of disease focused on homeostatic deviations, "Etiological Tree" , treatment of negative feedback, and the basic axiom of Systems Medicine, that will change the entire landscape of medicine, forever.

DISEASE

The disease is a certain homeostatic deviation of the complete set of steady-states that interact with each other in the body.

ETIOLOGY

Any single homeostatic deviation can result in or from other homeostatic deviations to form a link that is referred as the "Etiological Tree" in the book [Principles of Systems Medicine].

TREATMENT

The treatment is applying another self-recoverable deviated steady-state to replace the original one that was causing the disease.
